

### AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A computer system configured to integrate advertising within user-requested Web content ~~requested by users~~, comprising:

an advertisement server that hosts advertisements in a text-based format, the advertisement server comprising:

means for selecting a plurality of aggregated advertisements having a format and size compatible with the user-requested Web content when the user-requested Web content is converted to an audio format for insertion within the user-requested Web content in response to a request for Web content;

a text-to-speech transcoder, comprising:

means for converting Web content from a text-based format to an audio format ~~content~~ prior to streaming the audio format content to a user client device; and

means for serving Web content in an audio format to ~~the~~ a user client device via a telephone link with the user client device; and

a Web server that hosts Web content in a text-based format, comprising:

means, responsive to a user request via the client device for Web content, for retrieving an advertisement from the advertisement server, in response to the subject matter of the Web content;

means for inserting the retrieved ~~advertisement~~ advertisements within the user requested Web content; and

means for forwarding the user requested Web content and advertisement to the text-to-speech transcoder for conversion to an audio format and subsequent delivery to the user client device.

2. (Canceled)

3. (Canceled)

4. (Currently Amended) The computer system of claim 13, wherein the means for selecting the plurality of aggregated advertisements having a format and size compatible with user-requested Web content comprises means for retrieving ~~an aggregate of one or more~~

~~advertisements~~ the plurality of aggregated advertisements having a predetermined time length when delivered in an audio format.

5. (Original) The computer system of claim 1, wherein the text-based format comprises voice extensible markup language (VXML) format.

6. (Original) The computer system of claim 1, wherein the advertisement server further comprises means for storing information associated with serving an advertisement to a user.

7. (Original) The computer system of claim 1, wherein the advertisement server further comprises means for determining if a user listened to an advertisement in its entirety.

8. (Original) The computer system of claim 1, wherein the advertisement server further comprises means for determining how many times a user listened to an advertisement.

9. (Currently Amended) A computer system configured to integrate interactive advertising within user-requested Web content ~~requested by users, the computer system~~ comprising:

an advertisement server that hosts advertisements in a text-based format, wherein the advertisements are interactive when converted to an audio format comprising;  
means for selecting a plurality of aggregated advertisements having a format and size compatible with the user-requested Web content when the user-requested Web content is converted to an audio format for insertion within the user-requested Web content in response to a request for Web content;  
means for storing information associated with user interaction with an advertisement;

a text-to-speech transcoder, comprising:

means for converting Web content from a text-based format to an audio format prior to streaming the audio format content to a user client device;

means for serving Web content in an audio format to the a user client device via a telephone link with the user client device; and

means for notifying the advertisement server of user interaction with an advertisement; and

means for retrieving additional information associated with the advertisement in response to user interaction with the advertisement, wherein the user interaction comprises recognizing a key pressed on a keypad or one or more key words spoken by a user during delivery of an advertisement;  
means for delivering the additional information to the user client device in an audio format; and

a Web server that hosts Web content in a text-based format, comprising:

means, responsive to a user request via the client device for Web content, for retrieving an advertisement from the advertisement server in response to the subject matter of the Web content;

means for inserting the retrieved advertisement within the user requested Web content; and

means for forwarding the user requested Web content and advertisement to the text-to-speech transcoder for conversion to an audio format and subsequent delivery to the user client device.

10. (Canceled)

11. (Currently Amended) The computer system of claim 9, wherein the text-to-speech transcoder further comprises:

~~means for recognizing a key pressed on a keypad by the user during delivery of an advertisement; or~~

~~means for recognizing one or more key words spoken by the user during delivery of an advertisement; and~~

means for redirecting the user client device to additional audio content associated with the advertisement in response to recognition of one or more key words spoken or pressing of a key on a keypad by the user.

12. (Original) The computer system of claim 10, wherein the means for retrieving additional information associated with an advertisement in response to user interaction with the advertisement comprises means for retrieving additional information from the advertisement server.

13. (Canceled)

14. (Canceled)

15. (Currently Amended) The computer system of claim ~~9~~ 14, wherein the means for selecting the plurality of aggregated advertisements having a format and size compatible with user-requested Web content comprises means for retrieving ~~an aggregate of one or more~~ the plurality of aggregated advertisements having a predetermined time length when delivered in an audio format..

16. (Original) The computer system of claim 9, wherein the text-based format comprises voice extensible markup language (VXML) format.

17. (Canceled)

18. (Original) The computer system of claim 9, wherein the advertisement server further comprises means for determining if a user listened to an advertisement in its entirety.

19. (Original) The computer system of claim 9, wherein the advertisement server further comprises means for determining how many times a user listened to an advertisement.

20. (Currently Amended) A system for ~~method of~~ integrating advertising within user-requested Web content ~~requested by users,~~ the system comprising:  
a server accessible by a user client device via a telephone link, wherein the server performs a method comprising:

retrieving ~~an~~ a plurality of aggregated advertisements having a format and size compatible with the user-requested Web content when the user-requested Web content is converted to an audio format ~~advertisement~~ from an advertisement server[[,]] in response to the subject matter of the Web content and in response to a user request for Web content received by a Web server from a client device, wherein the Web content and advertisement have a text-based format;  
inserting the retrieved advertisement within the user requested Web content;  
forwarding the user requested Web content and advertisement to a text-to-speech transcoder for conversion to an audio format prior to streaming the audio format content to the user client device;  
converting the Web content and advertisement from a text-based format to an audio format; and  
serving the Web content and advertisement in an audio format to the user client device via a telephone link with the user client device.

21. (Canceled)

22. (Currently Amended) The system method of claim 20 ~~21~~, wherein selecting the plurality of aggregated advertisements having a format and size compatible with user-requested Web content comprises retrieving the plurality of aggregated ~~an aggregate of one or more~~ advertisements having a predetermined time length when delivered in an audio format.

23. (Currently Amended) The system method of claim 20, wherein the text-based format comprises voice extensible markup language (VXML) format.

24. (Currently Amended) The system method of claim 20, further comprising storing information associated with serving the advertisement to the user.

25. (Currently Amended) The system method of claim 20, further comprising determining if a user listened to the advertisement in its entirety.

26. (Currently Amended) The system method of claim 20, further comprising determining how many times the user listened to the advertisement.

27. (Currently Amended) A system for method of integrating interactive advertising within user-requested Web content requested by users, the system comprising:

a plurality of servers accessible by a user client device via a telephone link, wherein the servers perform a method comprising:

retrieving an a plurality of aggregated advertisements having a format and size compatible with the user-requested Web content when the user-requested Web content is converted to an audio format advertisement from an advertisement server in response to a user request for Web content received by a Web server from a client device and in response to the subject matter of the Web content, wherein the Web content and advertisement have a text-based format, and wherein the advertisement is configured to be interactive when converted to an audio format;

inserting the retrieved advertisement within the user requested Web content;

forwarding the user requested Web content and advertisement to a text-to-speech transcoder for conversion to an audio format prior to streaming the audio format content to the user client device;

converting the Web content and advertisement from a text-based format to an audio format;

serving the Web content and advertisement in an audio format to the user client device via a telephone link with the user client device; ~~and~~

storing information associated with user interaction with an advertisement;

notifying the advertisement server of user interaction with the advertisement-

retrieving additional information associated with the advertisement in response to user interaction with the advertisement wherein the user interaction comprises recognizing a key pressed on a keypad or one or more key words spoken by a user during delivery of an advertisement; and  
delivering the additional information to the user client device in an audio format.

28. (Canceled)

29. (Currently Amended) The system method of claim 27, further comprising:  
~~recognizing a key pressed on a keypad by the user during delivery of an advertisement;~~  
or  
~~recognizing one or more key words spoken by the user during delivery of the~~  
~~advertisement; and~~  
redirecting the user client device to additional Web content associated with the  
advertisement in response to recognition of one or more key words spoken or pressing of a key  
on a keypad by the user.

30. (Currently Amended) The system method of claim 28, wherein retrieving  
additional information associated with the advertisement in response to user interaction with the  
advertisement comprises retrieving additional information from the advertisement server.

31. (Canceled)

32. (Canceled)

33. (Currently Amended) The system method of claim ~~27~~ 32, wherein selecting the  
plurality of aggregated advertisements having a format and size compatible with user-requested  
Web content comprises retrieving ~~an aggregate of one or more~~ the plurality of aggregated  
advertisements having a predetermined time length when delivered in an audio format.

34. (Currently Amended) The system method of claim 27, wherein the text-based  
format comprises voice extensible markup language (VXML) format.

35. (Currently Amended) The system method of claim 27, further comprising storing  
information associated with serving the advertisement to the user.

36. (Canceled)

37. (Currently Amended) The system method of claim 27, further comprising determining if a user listened to the advertisement in its entirety.

38. (Currently Amended) The system method of claim 27, further comprising determining how many times the user listened to the advertisement.

39. (Currently Amended) A computer program product that integrates advertising within user-requested Web content ~~requested by users~~, the computer program product comprising a computer usable storage medium having computer readable program code embodied in the medium, the computer readable program code comprising:

computer readable program code that is configured to retrieve an a plurality of aggregated advertisements having a format and size compatible with the user-requested Web content when the user-requested Web content is converted to an audio format ~~advertisement~~ from an advertisement server in response to a user request for Web content received by a Web server from a client device and in response to the subject matter of the Web content, wherein the Web content and advertisement have a text-based format;

computer readable program code that is configured to insert the retrieved advertisement within the user requested Web content;

computer readable program code that is configured to forward the user requested Web content and advertisement to a text-to-speech transcoder for conversion to an audio format prior to streaming the audio format content to the user client device;

computer readable program code that is configured to convert the Web content and advertisement from a text-based format to an audio format; and

computer readable program code that is configured to serve the Web content and advertisement in an audio format to the user client device via a telephone link with the user client device.

40. (Canceled)

41. (Currently Amended) The computer program product of claim 39 40, wherein the computer readable program code that is configured to select the plurality of aggregated advertisements having a format and size compatible with user-requested Web content comprises computer readable program code that is configured to retrieve ~~an aggregate of one or more~~ the plurality of aggregated advertisements having a predetermined time length when delivered in an audio format.

42. (Original) The computer program product of claim 39, wherein the text-based format comprises voice extensible markup language (VXML) format.

43. (Original) The computer program product of claim 39, further comprising computer readable program code that is configured to store information associated with serving the advertisement to the user.

44. (Original) The computer program product of claim 39, further comprising computer readable program code that is configured to determine if a user listened to the advertisement in its entirety.

45. (Original) The computer program product of claim 39, further comprising computer readable program code that is configured to determine how many times the user listened to the advertisement.

46. (Currently Amended) A computer program product that integrates interactive advertising within user-requested Web content ~~requested by users~~, the computer program product comprising a computer usable storage medium having computer readable program code embodied in the medium, the computer readable program code comprising:

computer readable program code that is configured to retrieve a plurality of aggregated advertisements having a format and size compatible with the user-requested Web content when the Web content is converted to an audio format from an advertisement server in response to a user request for Web content received by a

Web server from a client device and in response to the subject matter of the Web content, wherein the Web content and advertisement have a text-based format, and wherein the advertisement is configured to be interactive when converted to an audio format;

computer readable program code that is configured to insert the retrieved advertisement within the user requested Web content prior to streaming the audio format content to the user client device;

computer readable program code that is configured to forward the user requested Web content and advertisement to a text-to-speech transcoder for conversion to an audio format;

computer readable program code that is configured to convert the Web content and advertisement from a text-based format to an audio format;

computer readable program code that is configured to serve the Web content and advertisement in an audio format to the user client device via a telephone link with the user client device; ~~and~~

computer readable program code that is configured to store information associated with user interaction with an advertisement;

computer readable program code that is configured to notify the advertisement server of user interaction with the advertisement-

computer readable program code that is configured to retrieve additional information associated with an advertisement in response to user interaction with the advertisement, wherein the user interaction comprises recognizing a key pressed on a keypad or one or more key words spoken by a user during delivery of an advertisement; and

computer readable program code that is configured to deliver the additional information to the user client device in an audio format.

47. (Canceled)

48. (Currently Amended) The computer program product of claim 46, further comprising:

~~computer readable program code that is configured to recognize a key pressed on a keypad by the user during delivery of an advertisement; or~~  
~~computer readable program code that is configured to recognize one or more key words spoken by the user during delivery of the advertisement; and~~  
computer readable program code that is configured to redirect the user client device to additional Web content associated with the advertisement in response to recognition of one or more key words spoken or pressing of a key on a keypad by the user.

49. (Original) The computer program product of claim 47, wherein the computer readable program code that is configured to retrieve additional information associated with the advertisement in response to user interaction with the advertisement comprises computer readable program code that is configured to retrieves additional information from the advertisement server.

50. (Canceled)

51. (Currently Amended) The computer program product of claim ~~46~~ 50, wherein the computer readable program code that is configured to select the plurality of aggregated advertisements having a format and size compatible with user-requested Web content comprises computer readable program code that is configured to retrieve the plurality of aggregated ~~an aggregate of one or more~~ advertisements having a predetermined time length when delivered in an audio format.

52. (Original) The computer program product of claim 50, wherein the text-based format comprises voice extensible markup language (VXML) format.

53. (Original) The computer program product of claim 46, further comprising computer readable program code that is configured to store information associated with serving the advertisement to the user.

54. (Canceled)

55. (Original) The computer program product of claim 46, further comprising computer readable program code that is configured to determine if a user listened to the advertisement in its entirety.

56. (Original) The computer program product of claim 46, further comprising computer readable program code that is configured to determine how many times the user listened to the advertisement.

57. (Currently Amended) An advertising server that integrates interactive advertising within user-requested Web content ~~requested by users~~, the advertising server comprising:

means for selecting a plurality of aggregated advertisements having a format and size compatible with the user-requested Web content when the user-requested Web content is converted to an audio format for insertion within Web content, in response to the subject matter of the Web content, requested by a user via a client device in communication with a Web server, wherein the advertisement has a text-based format and is configured to be interactive when converted to an audio format;

means for forwarding the selected advertisement to the Web server for insertion within the Web content requested by the user;

means for receiving notification from a text-to-speech transcoder that the selected advertisement has been delivered to the user client device in an audio format; ~~and~~

means for storing information associated with delivery of the advertisement to the user client device; and

means for storing information associated with user interaction with the advertisement.

58. (Canceled)

59. (Original) The advertisement server of claim 57, further comprising means for providing additional information associated with the advertisement to the user client device in response to user interaction with the advertisement.

60. (Canceled)

61. (Currently Amended) The advertisement server of claim 57 ~~60~~, wherein the means for retrieving the plurality of aggregated advertisements having a format and size compatible with the user-requested Web content comprises means for retrieving the plurality of aggregated advertisements having a predetermined time length when delivered in an audio format.

62. (Original) The advertisement server of claim 57, wherein the text-based format comprises voice extensible markup language (VXML) format.
